2022

EPD version

The first issue.

Basis of calculation

This EPD is developed in accordance with the European standard EN 15804+A2.

Comparability

EPDs of construction products may not be comparable if they do not comply with the requirements in EN 15804. EPD data may not be comparable if the datasets used are not developed in accordance with EN 15804 and if the background systems are not based on the same database.

Validity

This EPD has been verified in accordance with ISO 14025 and is valid for 5 years from the date of issue.

Use

The intended use of an EPD is to communicate scientifically based environmental information for construction products, for the purpose of assessing the environmental performance of buildings.

EPD type

- Cradle-to-gate with modules C1-C4 and D
- Cradle-to-gate with options, modules C1-C4 and D

Product information

Product description

The main product components are shown in Table 1. Values are given as intervals covering the twelve products with six different surfaces. Specific recipes are used, and the composition of input materials is 100 % in mass -% of declared products.

Table 1: Material composition of products

Material	Amount [%]
Steel	2,2 – 86,3
Brass	10,3 – 94,5
Plastic	1,75
Rubber	0,001
Other metals	0,61
Surface treatments	2,62
Ceramics	1,10

Product packaging:

The composition of the product's sales- and transport packaging is shown in the table below.

Table 2: Material composition of Sales and Transport Packaging for the final VOLA product

Material	Amount [%]
EPS	27,41
LDPE	1,93
Cardboard	64,29
Paper	6,36
Wooden pallet	0,01
Total	100,00

Representativity

This declaration, including data collection and the modelled foreground system including results, represents the production of 1 fixture from VOLA on the production site located in Denmark. Product-specific data are based on average values covering the period from 01.01.2022 to 31.12.2022. Background data are based on SimaPro 9.3 and are less than 10 years old. Only in a few cases are SimaPro 9.3 data supplemented with data from Ecoinvent 3.8 (2021).

Generally, the used background datasets are of high quality, and the majority of the datasets are only a few years old. VOLA buys certified electricity produced from wind energy in the period 1.1.2022-31.12.2022.

Hazardous substances

Declared products do not contain substances listed in the "Candidate List of Substances of Very High Concern for authorization" with the exception of lead contained in brass with a concentration above 0,1 %.

(<http://echa.europa.eu/candidate-list-table>)

Essential characteristics

There is no harmonized specification, but VOLA produces products according to relevant product standards. Components that are in contact with water are produced in lead-free brass, according to 4MS and California Assembly Bill AB1953. Components in stainless steel are produced in the material according to EN10088-3:2014 and AISI316 (American Iron and Steel Institute).

Further technical information can be obtained by contacting the manufacturer or on the manufacturer's website:

<http://www.vola.com>

Reference Service Life (RSL)

A reference service life (RSL) for all products is declared for 30 years. The lifespan of products has been provided by the manufacturer VOLA based on "BUILD REPORT 2021" Version 2021 – lifetime tables: group 53 (3) = lifetime of 30 years (BUILD REPORT 2021).

Picture of products

Figure 1: HV1, HV1M, and HV1L

Figure 2: HV1/150, HV1M/150, and HV1L/150

Figure 3: HV1+30, HV1M+30, and HV1L+30

Figure 4: HV1+30/150, HV1M+30/150, and HV1L+30/150

Twelve products (HV1, HV1/150, HV1+30, HV1+30/150, HV1L, HV1L/150, HV1L+30, HV1L+30/150, HV1M, HV1M/150, HV1M+30, HV1M+30/150) are calculated in six different surface groups (16 and 20, 19, 40, 27, 60, 64), see Figure 1, Figure 2, Figure 3, and Figure 4.

Group 4 called "Colors" have more surfaces: Grey (02), Blue (04), Orange (05), Light green (06), Yellow (08), Dark grey (09), Mocca (12), Bright red (14), Dark blue (15), Gloss black (17), Gloss white (18), Carmine red (21), Pink (25), Matt black (27), and Matt white (28).

Group 5 called "Exclusive color with PVD on Brass" have also more surfaces: Black (60), Deep black (62), Copper (63), Gold (65), and Nickel (68).

Group 6 called "Exclusive color with PVD on Stainless steel" have also more surfaces: Brushed black (61), Brushed copper (64), Brushed gold (70), and Dark brushed copper (71).

LCA background

Declared unit

The declared unit is taken as the input of materials in order to produce 1 fixture.

The LCI and LCIA results in this EPD relate to 1 fixture from VOLA for the types: HV1, HV1/150, HV1+30, HV1+30/150, HV1L, HV1L/150, HV1L+30, HV1L+30/150, HV1M, HV1M/150, HV1M+30, HV1M+30/150.

Table 3 shows declared units for 6 product groups with 6 different surfaces (16 and 20, 19, 40, 27, 60, 64) and 12 different variations of products (HV1, HV1/150, HV1+30, HV1+30/150, HV1L, HV1L/150, HV1L+30, HV1L+30/150, HV1M, HV1M/150, HV1M+30, and HV1M+30/150).

The results for:

- Group no. 1 refers to Table 6 to Table 10
- Group no. 2 refers to Table 11 to Table 15
- Group no. 3 refers to Table 16 to Table 20
- Group no. 4 refers to Table 21 to Table 25

- Group no. 5 refers to Table 26 to Table 30
- Group no. 6 refers to Table 31 to Table 35

Functional unit

Not defined

PCR

This EPD is developed according to the core rules for the product category of construction products with EN 15804, and Part B/ PCR-Part B: Requirements on the EPD for Bathroom and showers.

Guarantee of Origin – certificates

Foreground system:

The product is produced using electricity covered by GO in production 2022.

Background system:

Upstream and downstream processes are modelled using a European electricity grid mix.

Table 3: Declared unit

Group no.	Surface/Material		Surface no.	Name / Value												Conversion factor to 1 kg (average)
				HV1	HV1/150	HV1L	HV1L/150	HV1M	HV1M/150	HV1+30	HV1+30/150	HV1L+30	HV1L+30/150	HV1M+30	HV1M+30/150	
				[kg/piece]												
1	Polished and brushed chrome	Polished chrome	16 20	1,20	1,23	1,50	1,53	1,20	1,28	1,55	1,57	1,23	1,26	1,53	1,56	0,73
		Brushed chrome														
2	Natural brass	Natural brass	19	1,20	1,23	1,49	1,52	1,25	1,28	1,54	1,57	1,23	1,26	1,52	1,55	0,73
3	Stainless steel	Stainless steel	40	1,14	1,16	1,42	1,44	1,24	1,26	1,52	1,54	1,22	1,24	1,50	1,53	0,75
4	Colors	Matt black	27	1,29	1,32	1,59	1,62	1,32	1,36	1,62	1,65	1,30	1,34	1,60	1,63	0,69
5	Exclusive color (PVD on Brass)	Black	60	1,29	1,32	1,58	1,61	1,33	1,36	1,63	1,66	1,32	1,35	1,61	1,64	0,68
6	Exclusive color (PVD on Stainless steel)	Brushed copper	64	1,22	1,24	1,49	1,52	1,32	1,34	1,59	1,62	1,30	1,32	1,58	1,61	0,71

The Flow diagram (Figure 5) conforms with the requirements of the modular approach and shows all phases. All phases are described below.

Flow diagram

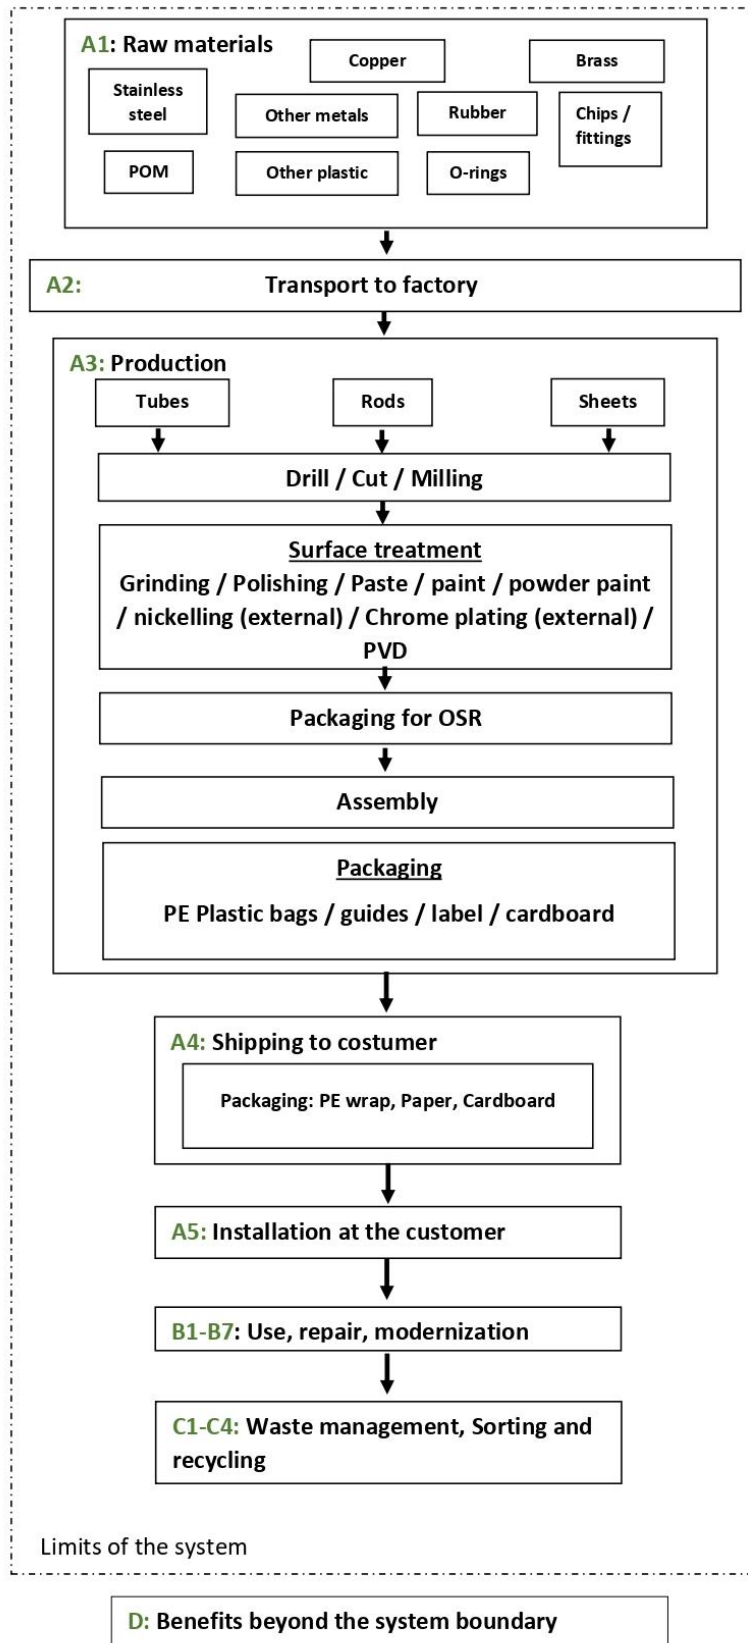

Figure 5: Flow diagram of product system with modules A1-D

System boundary

This EPD is based on a cradle-to-grave LCA, in which 100 weight-% have been accounted for.

The general rules for the exclusion of inputs and outputs follow the requirements in EN 15804, 6.3.5, where the total of neglected input flows per module shall be a maximum of 5 % of energy usage and mass and 1 % of energy usage and mass for unit processes.

Product stage (A1-A3) includes:

This product stage includes the acquisition of all raw materials, products, and energy, transport to the production site, packaging, and waste processing up to the "end-of-waste" state or final disposal. The LCA results are declared in aggregated form for the product stage, which means, that the sub-modules A1, A2, and A3 are declared as one module A1-A3. The manufacturing process is taken place in Denmark.

A1: Extraction and processing of raw materials

VOLA uses the purest (primary) steel and brass to make sure the products are built to last. Components from plastic, rubber, ceramic, and other metals are reproduced from suppliers.

The materials that are used to pack all raw materials are metal strips, cardboard, paper, wood, and plastic.

A2: Transport to the production site in Horsens, Denmark

The raw materials are transported to the manufacturing site. The modelling includes road and/or flight transportation of each raw material. The transportation of all raw materials is by trucks.

A3: Manufacturing processes

The production of sales packaging materials is taken into account at this stage. The processing of any waste arising from this stage is also included. The main raw material is stainless steel and brass. These materials constitute 80-90 % of the total product. Stainless steel components have different qualities: 304L, and 316L. The brass components are of different qualities: CW508L, CW511, CW608N, and CW614N. The rest of the components are mainly made of different kinds of rubber and plastic materials.

From solid brass/stainless steel rods or pipes, components are rotated, drilled, or milled on CNC machines. Subsequently, the components are ground/polished to create a unique surface, either by manual or automatic processes. Some components are hand-soldered or soldered by induction. The finished polished components are treated with a surface finish depending on the finish the customer wishes.

The wooden pallets for the transportation of products are part of a return system, and therefore only 1/25 is accounted for due to the 25 times reuse rate.

The colored surfaces in product group no 4, represented by surface no. 27 also include powder coating material. Powder coating waste from production is 45 % from group no. 4. The waste of brass from production is 49 % from groups no. 1, 2, 4, and 5; 66 % of brass waste is from groups no. 3 and 6.

The waste of steel from production is 49 % from groups no. 3, and 6; 74 % from groups no. 1, 2, and 5; and 57 % of steel waste is from group no. 27.

The waste of brass, steel, and powder coating during manufacturing processes is recycled and transported by lorry to the sorting and collecting center.

In this phase, the disposal of raw material packaging is considered. Waste packaging from raw materials (paper, cardboard, wood, metal) is transported to a sorting and collection center, where 100 % recycling is expected.

Transportation to the sorting and collecting center is covered by a European average EURO 5 lorry 16 t with a diesel engine, and distance to the recycling and incineration station is covered by a European average EURO 5 lorry >32 tons with a diesel engine.

The construction process stage (A4-A5) includes:

A4: Transportation from the VOLA production site in Horsens, Denmark to customers

Distribution to customers is based on the current European market situation and takes into account not only the current fleet mix with primarily Euro 5 vehicles but also vehicle loading with an average of 5 t and effective distances, see Table 36. It is implemented within Europe using diesel-powered trucks.

A5: Installation of products

Installation is simple and does not require any relevant energy consumption or use of materials, due to manual installment by technicians.

Mounting instructions are included with the product or can be downloaded on: www.VOLA.com

Apart from the waste of sales and transport packaging for the final VOLA product (paper, cardboard, and plastics), no additional material flows are generated during installation.

Overall, 58 % of the sales and transport packaging for the final VOLA product is recycled, 19 % is transported to the landfill, and 23 % is incinerated, with the potential benefits reported in module D.

The waste packaging materials are transported 300 km to the recycling center, 100 km to the incineration station, and 50 km to the landfill. Transportation is covered by a European average EURO 5 lorry 16 t with a diesel engine.

Use stage (B1-B7) includes:

B1: Use

The product has a reference service life of a minimum of 30 years. This determined that the product will last at least 30 years provided that the requirements for maintenance and repair throughout this period are kept. The lifespan of products has been provided by the manufacturer, VOLA. This LCA phase scenario includes a use stage based in Europe. There are no direct emissions from the use of VOLA products.

B2: Maintenance

VOLA has declaimed this maintenance information. Maintenance instructions are part of the VOLA product, which also be downloaded at: www.VOLA.com

Maintenance is assumed to be performed once a week. Waste packaging materials resulting from the maintenance are omitted.

B3: Repair

The product is made of a few parts that can easily be changed and replaced by new parts. The service interval for the VOLA parts depends on use and water quality scenarios. The estimated service interval is approx. 10 years. Parts that are calculated for repair are hoses, cartridges, and pilators. This module includes the waste handling of the disposed parts.

VOLA guarantees that it is possible to get spare parts a minimum of 30 years from the day the product is ordered. Service drawing is available on: www.VOLA.com

B4: Replacement

There is no calculated replacement due to the declaration for a product life of 30 years.

B5: Refurbishment

No refurbishment is taken into account within 30 years.

(B6-B7) Consumption data

This use stage consists of energy and water consumption for the users with an assumption to be used in bathrooms and kitchens for 30 years. The water use calculation follows the formula provided in the reference PCR. Water consumption is based on the European market for tap water. There is no energy consumption during the use phase.

The actual amount of water that is consumed during use partly depends on user behaviour. The technical operating scenario is available in Table 4 and Table 5.

The estimation has been made for the usage of tap aerators with 1,9 l/min water consumption, an average of 20 cycles per day, and a cycle time of 30 seconds.

Table 4: Consumption data - cycle time (1,9 l/min)

1,9 l/min water-saving aerators and Cycle time Settings of 30 sec.						
Use scenario		Intensity of use			Water consumption	
		Per day	Per year	Per RSL	[Litres] per year	[Litres] per RSL
Average building	0,95 liter per use	20	7.300	219.000	6.935	208.050

Table 5: Construction data

Name	Value	Unit
Maximum load temperature permanent operation	60	°C
Maximum load temperature temporary operation	70	°C
Flow rate (indications for a pressure range of 1-3 bar)	0,3	m ³ /h
Sound emissions	0-20	dB

End of Life (C1-C4) includes:

The end-of-life stage consists of the deconstruction/demolition, transport, waste management, and disposal processes to manage the product as waste after the use phase of 30 years life span.

The generated waste in modules C1-C4 is included up to the "end-of-waste" state or final disposal, with the potential net benefits reported in module D. The end-of-life stage is based on the European market.

C1: Deconstruction, Demolition

For the demolition of water basin mixers, the energy consumption is 0,1 kWh. The electricity is based on the European grid mix.

C2: Transport

This stage includes the transportation of the demolished product. It is considered that 0,7 % of product parts are transported 100 km to the incineration station, 92,5 % of the product is recycled and transported 300 km, and 6,7 % of the product is transported 50 km to the landfill. Transport is covered by a European average EURO 5 lorry 16 t with a diesel engine.

C3: Waste Processing

The end-of-life stage represents the waste scenario after a use stage where 0,7 % of the product parts are incinerated in module C3 with energy recovery accounted for in module D. Overall, 92,5 % of the product is recycled with materials recovery accounted for in module D.

C4: Disposal

Overall, 6,7 % of the product is transported to a landfill.

Re-use, recovery, and recycling potential (D) includes:

Module D includes reuse, recovery, and/or recycling potential, expressed as net impact and benefits, due to reuse, recycling, and incineration of materials with energy recovery in modules A5, B3, and C3.

The reused components made from raw materials in the product stage were assumed to replace similar components from raw materials. The plastic and rubber parts of the product are assumed to be incinerated at the end-of-life stage in module C3, whereas an energy recovery (75 % heat, 25 % electricity) and energy efficiency (80 % for heat, 25 % for electricity) from the incineration process is accounted for in module D.

LCA results

The significant difference in the environmental impact lies in the base material and the surface treatment, and not in the product manufacturing. Therefore, environmental calculations appear on the following pages based on the basic material (brass/stainless steel) and the following surface treatments (no. 1-6). The potential environmental impact variation between the products and colors is below 10 %, therefore the worst case is chosen to represent the results of one product in line with EPD Danmark.

Group no. 1. Polished and brushed chrome, represented by HV1L+30/150-16 – Polished chrome

Group no. 2. Natural brass, represented by HV1L+30/150-19 – Natural brass

Disclaimers	1 The results of this environmental indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator. 2 This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimers	1 The results of this environmental indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator. 2 This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimers	1 The results of this environmental indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator. 2 This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimers	1 The results of this environmental indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator. 2 This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Table 35: Biogenic carbon content

BIOGENIC CARBON CONTENT PER FIXTURE		
Parameter	Unit	At the factory gate
Biogenic carbon content in a product	kg C	0
Biogenic carbon content in accompanying packaging	kg C	0,11
Note	1 kg biogenic carbon is equivalent to 44/12 kg of CO ₂	

Additional information

LCA interpretation

The hotspot analysis identified the areas where improvements can be made to reduce the environmental impact on VOLA’s products. The hotspot analysis has identified that brass and steel have the highest material contribution to the overall environmental impact. These two materials are the main part of the product, and therefore it has been analysed with the highest impact among the other materials.

Module B7, Operational water use is associated with the highest environmental impact because the scenario is based on a Reference Service Life of 30 years, with an assumption of results of 208.050 l water consumption for a default scenario of 1,9 l/min and 20 use cycles per day.

Technical information on scenarios

Table 36: Average transport to the building site (A4)

Scenario information	Value	Unit
Fuel type	Diesel	-
Vehicle type	Euro 5	-
Average transport distance	Group 1: HV1L+30/150-16: 828 km Group 2: HV1L+30/150-19: 828 km Group 3: HV1L+30/150-40: 828 km Group 4: HV1L+30/150-27: 828 km Group 5: HV1L+30/150-60: 828 km Group 6: HV1L+30/150-64: 828 km	km
Capacity utilization (including empty runs)	85 % for trucks	%
Gross density of products transported	930 kg/m ³ (with lorry) 697 kg/m ³ (with flight) 442 kg/m ³ (with steel cage)	kg/m ³

Table 39: Use (B1-B7)

Scenario information	Value	Unit
B1 – Use		
	HV1 is a single-lever mixer for control of both the water temperature and the water flow. The technical operating scenario is available in the “Consumption data” (B6-B7).	-
B2 – Maintenance		
Maintenance process	Maintenance instructions are included with the VOLA product and can also be downloaded on www.vola.com	-
Maintenance cycle	Once per week = 1.560 times per RSL	/RSL
Ancillary materials for maintenance (specify which)	Cloth, little soap for cleaning, cotton bud, and detergents that are meant for the cleaning surface of the product (according to the maintenance instructions included in the VOLA product). Soap (7,8 kg/RSL) Water (816 l/RSL) Acetic acid (3,6 l/RSL)	kg/RSL
Waste materials resulting from the maintenance	0	kg
Net freshwater consumption during maintenance	0,816	m ³
Energy input during maintenance	0	kWh
B3 – Repair		
Repair process	The product is made of parts that can be changed and replaced by new parts. Inspection is performed and a description of needed repair is noted on a sales order in agreement with the customer and Technical Support. The repair is carried out and the product and returned to the customer. If repair is impossible, the customer will be contacted by technical support and a new product can be offered.	-
Inspection process	As part of the repair process.	-
Repair cycle	0,1	/year
Ancillary materials	NA	kg/RSL

Waste materials (specify which)	Materials	Group 1 HV1L+30/150- 16	Group 2 HV1L+30/150- 19	Group 3 HV1L+30/150- 40	Group 4 HV1L+30/150- 27	Group 5 HV1L+30/150- 60	Group 6 HV1L+30/150- 64	kg/RSL	
	Hoses (Steel)	0,0275	0,0275	0,0275	0,0275	0,0275	0,0275		0,0275
	Cartridges (Ceramic, Brass, Plast)	0,0461	0,0461	0,0461	0,0461	0,0461	0,0461		0,0461
	Pilator (Plastic)	0,0016	0,0016	0,0016	0,0016	0,0016	0,0016		0,0016
	SUMMARY	0,0752	0,0752	0,0752	0,0752	0,0752	0,0752		0,0752
Net freshwater consumption during repair	0							m ³	
Energy input during repair	0							kg/RSL	
B6 + B7 – Use of energy and water									
Ancillary materials specified by material	Not specified							kg	
Net freshwater consumption	208 m ³ (20 cycles per day, 30 sec. length of use cycle, lifespan of 30 years) with 1,9 l/min flow rate							m ³	
Type of energy carrier	-							kWh/RSL	
The power output of equipment	-							kW	
Characteristic performance	Not specified							As appropriate	
Further assumptions for scenario development	Not specified							As appropriate	

Table 40: End of life (C1-C4)

Scenario information	Value						Unit
	Group 1 HV1L+30/150- 16	Group 2 HV1L+30/150- 19	Group 3 HV1L+30/150- 40	Group 4 HV1L+30/150- 27	Group 5 HV1L+30/150- 60	Group 6 HV1L+30/150- 64	
Collected separately	1,57E+00	1,57E+00	1,54E+00	1,65E+00	1,66E+00	1,62E+00	kg
Collected with mixed waste	-						kg
Reuse	0						kg
Recycling	1,46E+00	1,46E+00	1,43E+00	1,50E+00	1,50E+00	1,47E+00	kg
Energy recovery	9,87E-03	9,87E-03	9,87E-03	9,87E-03	9,87E-03	9,87E-03	kg
Landfilling	1,07E-01	1,04E-01	9,92E-02	1,37E-01	1,52E-01	1,43E-01	kg
Assumptions for scenario development	-						As appropriate

Table 41: Re-use, recovery, and recycling potential (D)

Scenario information/Material	Value						Unit
	Group 1 HV1L+30/150-16	Group 2 HV1L+30/150-19	Group 3 HV1L+30/150-40	Group 4 HV1L+30/150-27	Group 5 HV1L+30/150-60	Group 6 HV1L+30/150-64	
Electrical energy recovered	0,17	0,17	0,17	0,17	0,17	0,17	MJ
Thermal energy recovered	1,63	1,64	1,63	1,63	1,64	1,64	MJ
Materials recovery	1,56	1,56	1,54	1,63	1,64	1,61	kg

Indoor air

The EPD does not give information on the release of dangerous substances to the indoor air because the horizontal standards on measurement of the release of regulated dangerous substances from construction products using harmonized test methods according to the provisions of the respective technical committees for European product standards are not available.

Soil and water

The EPD does not give information on the release of dangerous substances to soil and water because the horizontal standards on measurement of the release of regulated dangerous substances from construction products using harmonized test methods according to the provisions of the respective technical committees for European product standards are not available.
